Tekskil Universal TallyCAM©

The Tekskil Universal TallyCAM©
works with any camera or prompter

The latest generation of Production Switchers and Broadcast Cameras provide **two** Tally states to ensure the talent knows how shots are being staged.

Is it time to give your old Tally Lights a facelift ?

You've got talent cueing issues when:

- The new cameras have standby and on-air indicators but the old prompters have just a single red light.
- The tally lights aren't bright enough to see easily and there's no adjustment.
- The suction cups that stick the tally light sensors onto the cameras fall off just to aggravate you.
- The talent can't squint enough to read the handmade labels used for camera IDs.

Eliminate talent cueing problems with Tekskil's Universal TallyCAM© System

- Easy mount display integrating standby, on-air and camera ID indicators
- Bright, color LED arrays - individually dimmable
- Red/Amber LED Bar and Red Camera Display
- Built-in switching logic will interface with any camera or control room tally logic
- 12V DC powered - High Bright super efficient LED module draws only 3 watts
- Mounts on any prompter head
- Built Tekskil tough for years of reliable operation
- Lightweight aluminum metal enclosure (8" x 3" x 1")

Mount our state of the art tally system in your studio and see the difference for yourself
